At the time the disclosure or disclaimer statement is delivered to you ("the buyer"), you are required to date and sign a written acknowledgement of receipt on the disclosure or disclaimer statement which shall be included in or attached to the contract of sale.

Your rights as a buyer under Section 10-702 may not be waived in the contract and any attempted waiver is void. Your rights as the buyer to terminate the contract under Section 10-702 are waived conclusively if not exercised before:

- (i) Closing or occupancy by you, whichever occurs first, in the event of a sale; or
- (ii) Occupancy, in the event of a lease with option to purchase.

The information contained in the property condition disclosure statement is the representation of the seller and not the representation of the real estate broker or sales person, if any. A disclosure by the seller is not a substitute for an inspection by an independent professional home inspection company. You should consider obtaining such an inspection. The information contained in a disclosure statement by the seller is not a warranty by the seller as to the condition of the property of which condition the seller has no actual knowledge or other condition, including latent defects, of which the seller has no actual knowledge. Test Site Address: 8515 ROSEWOOD DRIVE
BETHESDA, MD 20814

The following Radon Test Results are representative of the radon levels measured during the sampling period only, and do not represent levels which vary from room to room, and from season to season. This is a short-term (double) test and is representative of the potential for elevated radon over time, under closed living conditions and at the location tested.

The U.S. EPA Guideline (action level) for radon mitigation = 4.0 pico Curies / liter or greater

Sampling Period Start :	02-20-20	10:15 AM	
Sampling Period Stop :	02-22-20	10:15 AM	48.00 HOURS
	<u>Location</u>	<u>Radon Test Results</u>	
Test Unit #1 :	Basement	Area Test Result =	1.2 pCi/L
Test Unit #2 :	Basement	Area Test Result =	1.2 pCi/L
		Average Test Result=	1.2 pCi/L

Test Results are reported in units of Pico Curies per Liter (pCi/L) which is a measurement of Alpha Particle Emissions (Radioactive Ionization) in air. These test results are derived from short-term Electret Ion Chamber measurements and serve to indicate if there is a potential for a radon problem at this site.

The following page describes suggested actions to consider as recommended by the U.S. EPA in response to these reported levels. Please also refer to the following US EPA Publication. <http://www.epa.gov/radon/pubs/citguide.html>

HOMES ARE US, Inc. is certified under the National Radon Safety Board's Radon Proficiency Program standards sanctioned by the U.S. EPA. NRSB Certification Numbers are: RMS 7SS0099 & ARL #9010.

RADON GUIDELINES

The U.S. EPA suggests that homes and buildings have radon levels below 4.0 pico Curies per liter (pCi/L).

4.0 pico Curies per liter is a recommended guideline established to help direct the public in making meaningful decisions regarding radon gas and its viability. This guideline of 4.0 pCi/L is also referred to as an ***"Action Level"***.

Depending upon the results of your short-term screening test, you may need to have follow-up or longer term measurements made in order to assess the variability of radon in your home or building over time because weather and seasonal living conditions affect radon levels.

If your screening test is below 4.0 pCi/L the building probably does not have significant levels when averaged over a year or multiple seasonal changes in normal living conditions.

The following guidelines are provided to help you determine the urgency of your need for additional measurements, mitigation work, or whether you have a problem at all.

Additional information was provided at the time of this test placement or during your inspection. Please call HOMES ARE US, Inc. if you have questions or contact the National Radon Information service: **1-800-767-7236** or **www.epa.gov/iaq/radon/**

<i>Levels pCi/L</i>	<i>Suggested Action</i>
Below 4.0	Follow-up measurements are probably not necessary unless structural changes are planned. EPA does recommend repeat testing periodically, usually every 2 years.
4.0 & above	Mitigation should be performed
